Software Developer

Company Profile

Electric Paper GmbH a leading provider of software solutions for the automated capturing of documents and forms, headquartered in Lüneburg (Germany) with offices in Frankfurt/Main, Berlin, London and Zürich. For our well-known customers from numerous branches we offer automated systems for data- and document capturing by Web, eForms, scanning and Fax. Solutions for document classification and data extractions by means of document processing (OCR, ICR, OMR and Barcode) are part of our portfolio as well as high-performance web portals for the automated conduction of surveys. Our software products are marketed world-wide, including Hungary. Electric Paper GmbH is seeking the foundation of a software development unit in Budapest.

Your Task

With a team of experienced colleagues you develop web portal applications for software system integration. Providing technical consultancy and implementation of custom solutions within existing software system environments is also a main field for your project team.

Your Profile

- Ideally you have completed a university or technical college and/or are in possession of multiple years of experience as a software developer
- You hold good practical experience with modern software development tools and methods (OOP, TDD, Java, dotNET, PHP, XML, WSDL and UML).
- You are acquainted with Database systems (MySQL, MS-SQL, Oracle) and Web Servers (Apache, IIS, Tomcat, etc.) as well as their platform specific peculiarities.
- You enjoy the customer friendly designing of complex web applications and the development of integration solutions between various software systems.
- Good command of English language, alternatively German
- You are characterized by analytical thinking, capacity for teamwork, sense of responsibility and the ability to develop flexible solutions using your imagination.

We offer:

- A diversified work environment
- Room for personal development
